**May, 2021**

## DECLARATION

We hereby declare that the work presented in this project entitled “**STELLARSTUDENT**” submitted towards completion of Project Work in IV year of B.Tech, CSE at ‘BVRIT HYDERABAD College of Engineering For Women’, Hyderabad is an authentic record of our original work carried out under the guidance of Mr. Dr. N. Sreekanth, Associate Professor, Department of CSE.

Sign with Date:

Ms. T. Tarani

(17WH1A0576)

Sign with Date:

Ms. P.Raga Rasagna

**BVRIT HYDERABAD**  
**College of Engineering for Women**  
**(NBA Accredited – EEE, ECE, CSE and IT)**  
**(Approved by AICTE, New Delhi and Affiliated to JNTUH, Hyderabad)**  
**Bachupally, Hyderabad – 500090**

**Department of Computer Science and Engineering**

**Certificate**

This is to certify that the Project Work report on “**STELLARSTUDENT**” is a bonafide work carried out by Ms. T. TARANI (17WH1A0576); Ms. P. RAGA RASAGNA (17WH1A0599); Ms. M. NAGA PRAVALLIKA (18WH5A0517); in the partial fulfilment for the award of B.Tech. Degree in **Computer Science and Engineering, BVRIT HYDERABAD College of Engineering for Women, Bachupally, Hyderabad**, affiliated to Jawaharlal Nehru Technological University Hyderabad, Hyderabad under my guidance and supervision.

The results embodied in the project work have not been submitted to any other University or Institute for the award of any degree or diploma.

**Head of the Department**  
**Dr. K. Srinivasa Reddy**  
**Professor and HoD**  
**Department of CSE**

**Guide**  
**Mr. Dr. N. Sreekanth**  
**Associate Professor**  
**Department of CSE**

**External Examiner**

## **Acknowledgement**

We would like to express our sincere thanks to **Dr. K V N Sunitha, Principal, BVRIT HYDERABAD College of Engineering for Women**, for providing the working facilities in the college.

Our sincere thanks and gratitude to our **Dr. K. Srinivasa Reddy, Professor**, Department of CSE, **BVRIT HYDERABAD College of Engineering for Women** for all the timely support and valuable suggestions during the period of our project.

We are extremely thankful and indebted to our internal guide, **Mr. Dr. N. Sreekanth**, Associate Professor Department of CSE, **BVRIT HYDERABAD College of Engineering for Women** for his constant guidance, encouragement and moral support throughout the project.

Finally, we would also like to thank our Project Coordinator, all the faculty and staff of **CSE** Department who helped us directly or indirectly, parents and friends for their cooperation in completing the project work.

**Ms. T. TARANI**  
**(17WH1A0576)**

**Ms. P. RAGA RASAGNA**  
**(17WH1A0599)**

**Ms. M. NAGA PRAVALLIKA**  
**(18WH5A0517)**

## **Abstract**

StellarStudent is a social web application for colleges. It helps to connect both students and faculty. It refers to the outstanding students and showcases the ones better than everyone else. Stellar is a word of praise or excitement and StellarStudent aims to praise the best performed students by their performances tracked through the application. Any student who puts the time and effort into their courses is a StellarStudent.

The project involves developing a website where complete details of the students are recorded such as their academic and non-academic achievements. They can upload their certificates and the faculty can view them. Students can also view the materials uploaded by the faculty, view placement details and materials, students can participate in quizzes. This application is also helpful to know various events/activities happening in the college through notifications. Students and faculty can view latest updates and timelines, this application also supports various meetings and discussions.

# **1. Introduction**

StellarStudent is a web application that deals with student and faculty. Ever since digitalization started in the country, schools and colleges want the best way possible to share information to their students. Some colleges use Google Drive or Whats app to share materials or collect other documents. However, the chance of data loss or misplacement is guaranteed. It is better for the college to have an admin who can look after all the happenings in the college website in just one click. With high security and validations of users, the chances of data misplacement are low with StellarStudent. This project aims to connect the students with their faculty with no miscommunication. It is a web established web-based application that involves in faculty uploading study materials and notices like events and placements drives, viewing certifications and quiz result of students. Students can also communicate with each other via exchange of images, feedback, and discussion. Users can share ideas, activities, events, and interests. This application can be handled by the admin and manage student as well as faculty.

## **1.1 Objective**

The StellarStudent is a web-based project for BVRIT-H students and faculty. The main objective of this project is to let the college students interact with their faculties. This helps college administrator to track all the activities of the college. In this project the faculties can upload materials, quizzes, etc. Even students can ask questions to faculties and can also upload the certificates. Our main goal is to ensure cost effective, technical excellence and secure app.

## **1.2 Methodology**

To store the user data MYSQL has been used as a database. HTML, CSS has been used for front end development. PHP is used as a server-side language, which is used to connect front-end to back-end. We can run this application in our browser.

## **2. Software requirements specifications**

### **2.1 Introduction:**

SRS describes the requirements and specifications of StellarStudent, a web-based application for the college. This section gives a scope, description and overview of everything included in this SRS document. Also, the purpose for this document is described and a list of abbreviations and definitions is provided.

### **2.2 Purpose:**

The purpose of this document is to present a detailed description of StellarStudent. It will illustrate the purpose and complete declaration for the development of system. It will also explain system constraints, interface and interactions with other external applications.

### **2.3 Scope:**

The project StellarStudent helps college students to interact with their faculties and many more. This web application can be accessed by students and faculty of BVRIT HYDERABAD College of Engineering for Women.

The main scopes of the projects are:

- The faculties can upload study materials online. The students can view uploaded study materials by faculties.
- In the discussion section, the students can post any queries to faculties and faculties can post answers.
- The administrator or faculty can publish latest events and updates.
- Admin has full authority of the website to manage students, discussion forum, faculties, quiz question answers, chat features, course, and certificate uploaded by the students.
- Students can upload their certificates that will be helpful for the faculty for easy verification.

### **3. Overall description**

#### **3.1 Product Perspective:**

The project StellarStudent is the web-based application with two interfaces: One is for students and another is for management. The website works in the desktop computers, laptops, and mobile devices with the help of browser.

#### **3.2 Product Function:**

The project StellarStudent has following product functions:

- The web portal will provide functionality to manage the system and the student information.
- The website is secure because user must enter login details to access the website.
- The system contains huge records. For this reason, the search option has been provided in all report pages. The search results can be viewed in the list view.
- The product works online with help of internet connection.

#### **3.3 User Characteristics:**

It is considered that the user does have the basic knowledge of operating the internet and its accession. The administrator is expected to be familiar with the interface of the technical support system.

#### **3.4 General Constraints:**

This system is provisioned to be built on the Core PHP which is highly flexible. Decision regarding which database to use should be taken considering the fact that data being exchanged or stored is large, and the appropriate data management system will yield efficient performance.

#### **3.5 Assumptions and Dependencies**

- Internet connection required.
- 24X7 uptime server connection required.
- One assumption about the product is that it will always be used on mobile phones that have particular technical support.

## 4. Specific Requirements

### 4.1 External Interface Requirements:

#### 4.1.1 User interfaces:

There are three types of users in this system. They are:

- **Administrator:** The administrators are the main users with full authority who handles complete website information.
- **Faculty:** Faculties are the users who monitors students, uploads quiz questions, study materials, view students' certificates and publish result.
- **Student:** Students are the registered users. They can view study materials, quiz questions, results, upload certificates and communicate with each other etc.

#### 4.1.2 Hardware interfaces

- **Operating system:** Windows 8 onwards
- **Hard disk:** minimum 40 GB hard disk
- **RAM:** minimum 1 GB RAM
- **Processor:** Intel i3 or above

#### 4.1.3 Software interfaces

- XAMPP 1.8.2
- Apache server
- PHP 5.4
- MYSQL server 5.5
- Star UML

### 4.2 Functional Requirements:

- **Dashboard module:** This dashboard module is for administrator where admin can manage complete control of the website. Admin is the super user of the website.
- **Settings module:** In the settings module the administrator can add or delete department details, course details, subject details, etc.
- **Faculty control panel:** The administrator has option to add new faculty records. The system will send login details to the faculties. The faculties can publish quiz questions, study materials, timetable, syllabus and result.
- **Student Account panel:** The students can login to the website by entering login id and password. The administrator approves new student profile details. The student can update their profile after the login.
- **Discussion module:** In this module students can send questions in the discussion panel. The faculties can answer to all students' questions. All the question-and-answer records stores in the discussion panel. All students can view discussion panel records.
- **Study materials module:** In this module the faculties can upload notes and documents by entering book details. This helps students to refer for exam, studies, etc.
- **Individual Chat and Group chat module:** This allows users to chat with their friend circles. Users can send invitation to their friends to join the chat system. The user can create chat room in the group chat.
- **Quiz module:** This module provides a common platform to connect students and faculties online. The faculty can create Quiz and student can take up quiz. The quiz result and point system will display in the student account panel

- **Certificate module:** The Students can upload their certificates and Faculty can view and Download their Certificates.

#### **4.3 Performance requirements:**

- This section lists the performance requirements expected from the StellarStudent Project.
- The users shall be able to add any records fewer than 5 seconds.
- The users shall be able to view any records fewer than 10 seconds.
- The users shall be able to download videos within 20 - 40 seconds.
- The navigation between pages shall take fewer than 5 seconds.
- The application shall be able to do a validation check on the information provided in the user-authentication form and the place-order form to avoid false or incomplete information.

#### **4.4 Design constraints:**

##### **4.4.1 System attributes:**

##### **Integrity:**

- The authorized user shall be allowed to access the StellarStudent Project application.
- Based on the user type, the StellarStudent shall provide a user specific interface.

##### **Correctness:**

- The assigned project modules should be received by the specified user.

##### **Availability:**

- The system shall be made available to the students, faculties, and administrator year round.

##### **Robustness:**

- The system shall be able to save and view all the records in the fraction of seconds.

## **5. System Design**

### **5.1 Introduction:**

Software design sits at the technical kernel of the software engineering process and is applied regardless of the development paradigm and area of application. Design is the first step in the development phase for any engineered product or system. The designer's goal is to produce a model or representation of an entity that will later be built. Beginning, once system requirements have been specified and analyzed, system design is the first of the three technical activities -design, code and test that is required to build and verify software. The importance can be stated with a single word "Quality". Design is the place where quality is fostered in software development. Design provides us with representations of software that can assess quality. Design is the only way that we can accurately translate a customer's view into a finished software product or system. Software design serves as a foundation for all the software engineering steps that follow. Without a strong design we risk building an unstable system – one that will be difficult to test, one whose quality cannot be assessed until the last stage. During design, progressive refinement of data structure, program structure, and procedural details are developed, reviewed and documented. System design can be viewed from either technical or project management perspective. From the technical point of view, design is comprised of four activities – architectural design, data structure design, interface design and procedural design

### **5.2 Data Flow Diagram:**

A data flow diagram is a graphical representation of the flow of data through an information system. A data flow diagram can also be used for the visualization of the data processing. It is common practice for a designer to draw a context level DFD. It shows the interaction between the system and the outside entities. This context level DFD, is then exploded to show more detail of the system being modelled.

A DFD represents flow of data through a system. Data flow diagrams are commonly used during problem analysis. It views a system as a function that performs the input into the desired output. A DFD shows movement of data through the different transformations or processes in the system.

Data Flow diagrams can be used to provide the end users with the physical idea of where the data they input ultimately has an effect upon the structure of whole system from order to dispatch to restock how any system is developed can be determined through data flow diagram. The appropriate register saved in database and maintained by appropriate authorities.

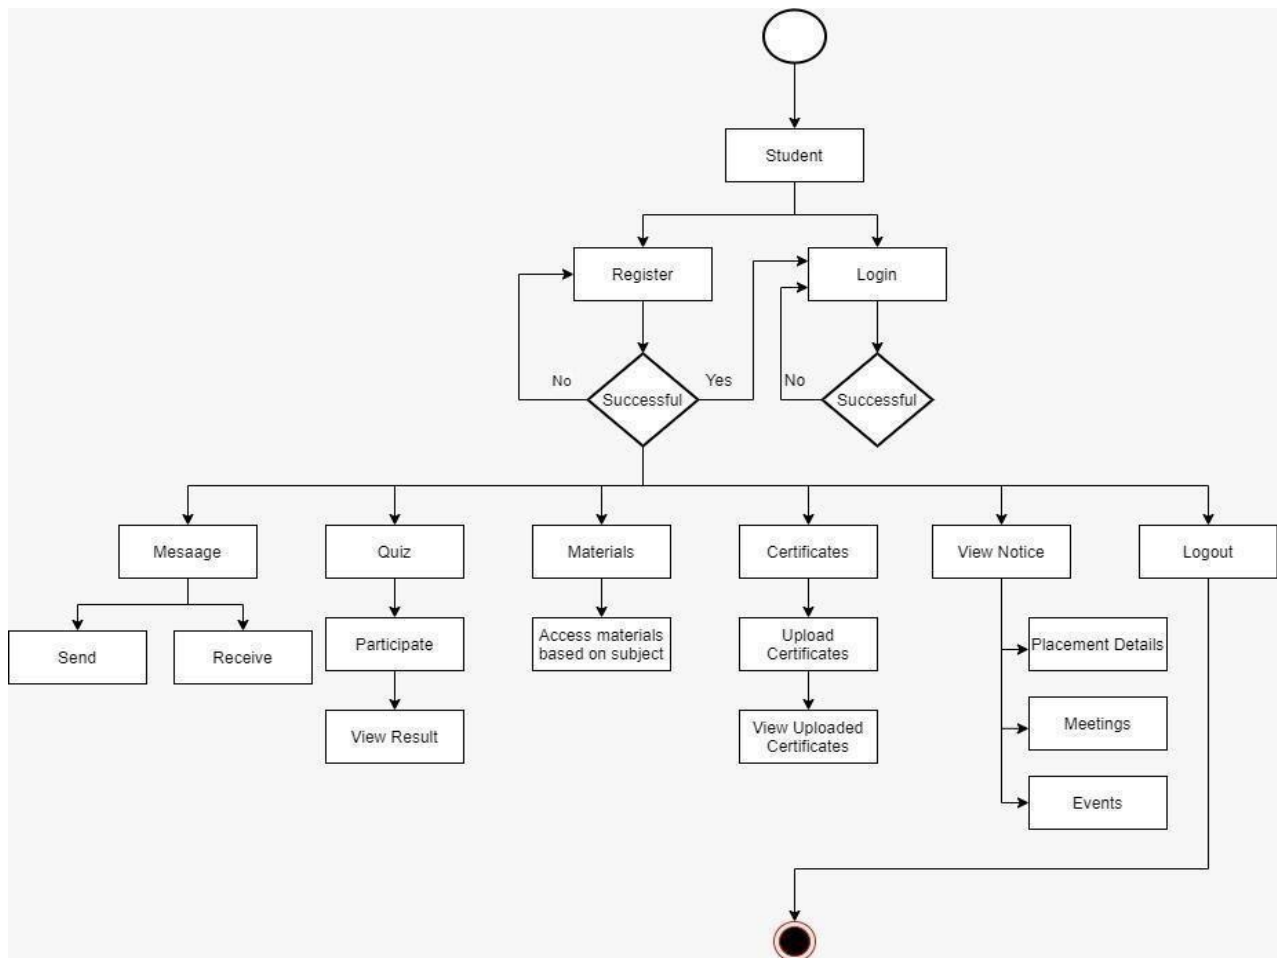

Fig 1: Flow Diagram of Student

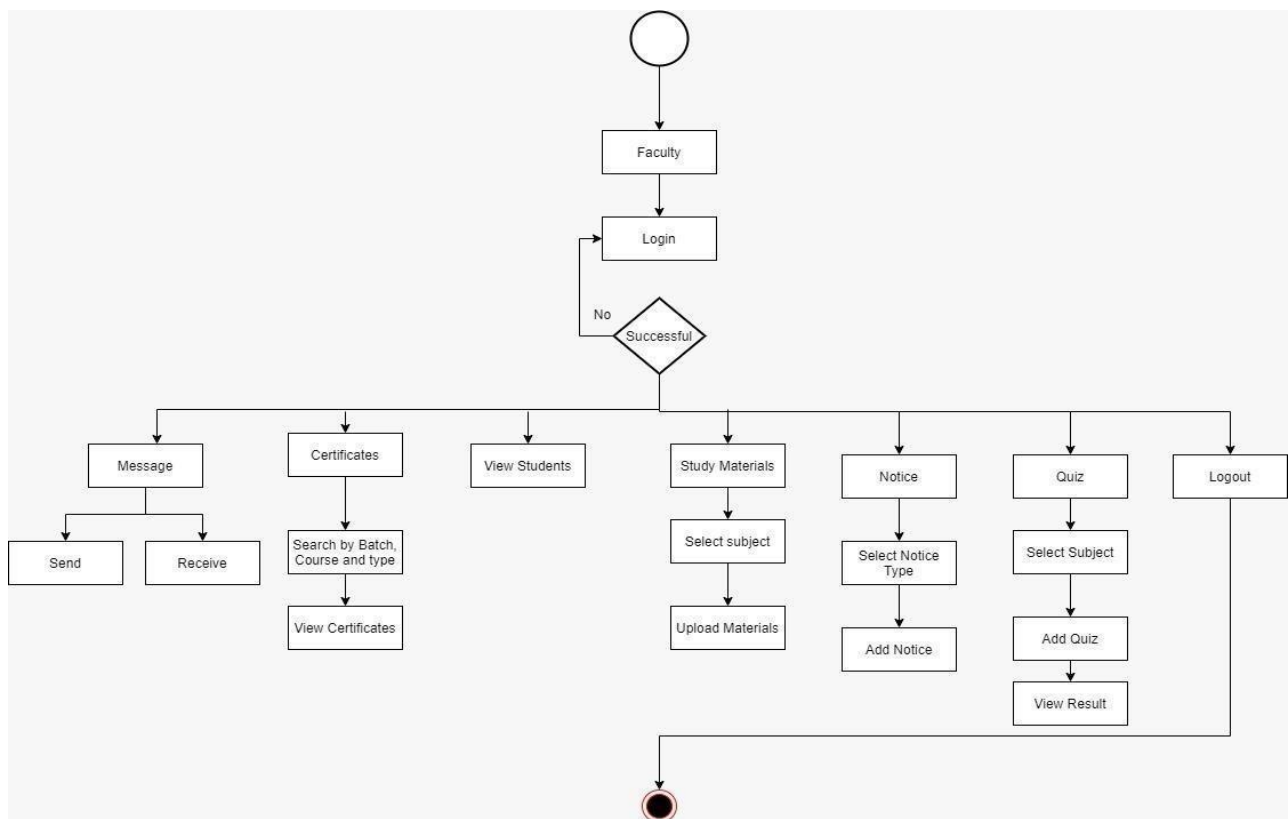

Fig 2: Flow Diagram of Faculty

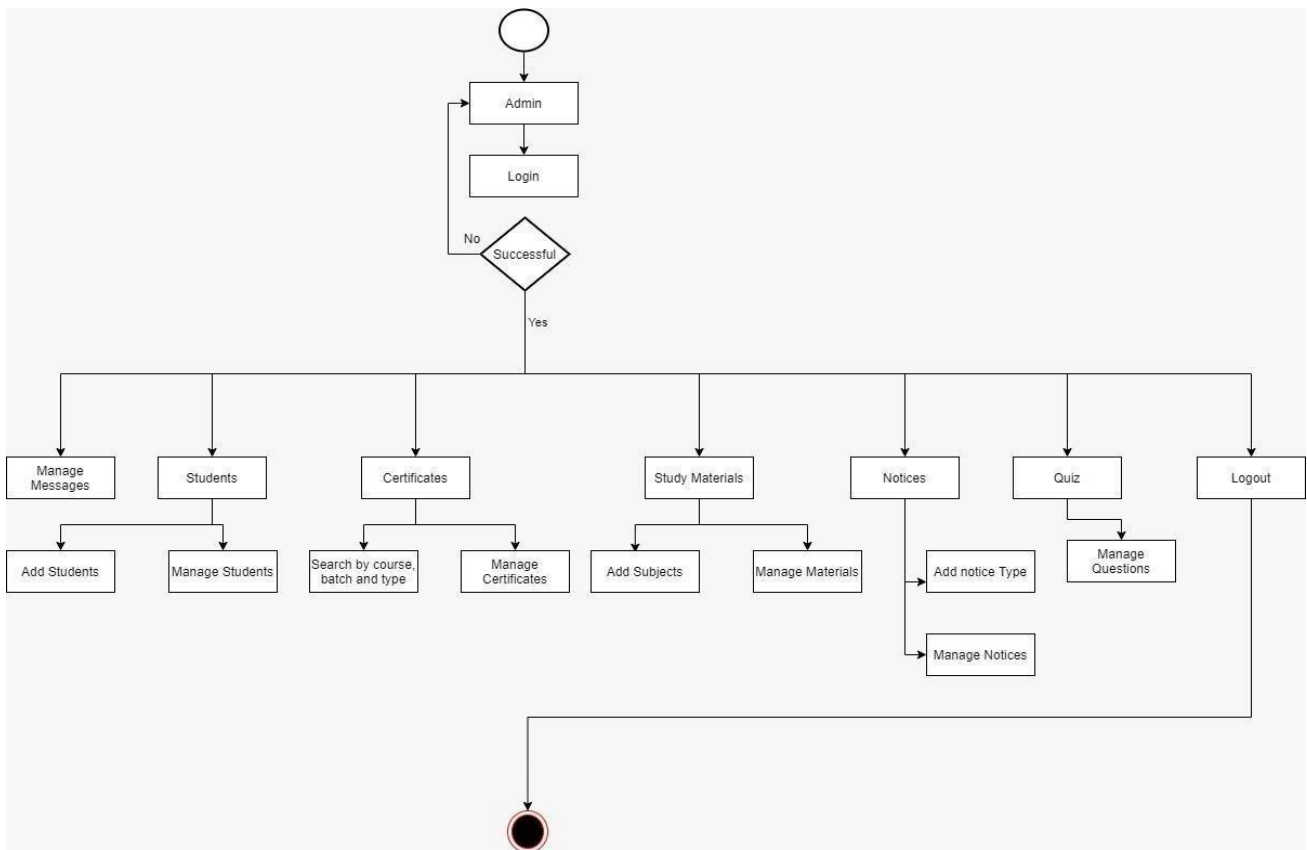

Fig 3: Flow Diagram of Admin

### 5.3 Use Case Diagram:

Use case diagrams consist of actors, use cases and their relationships. The diagram is used to model the system/subsystem of an application. A single use case diagram captures a particular functionality of a system.

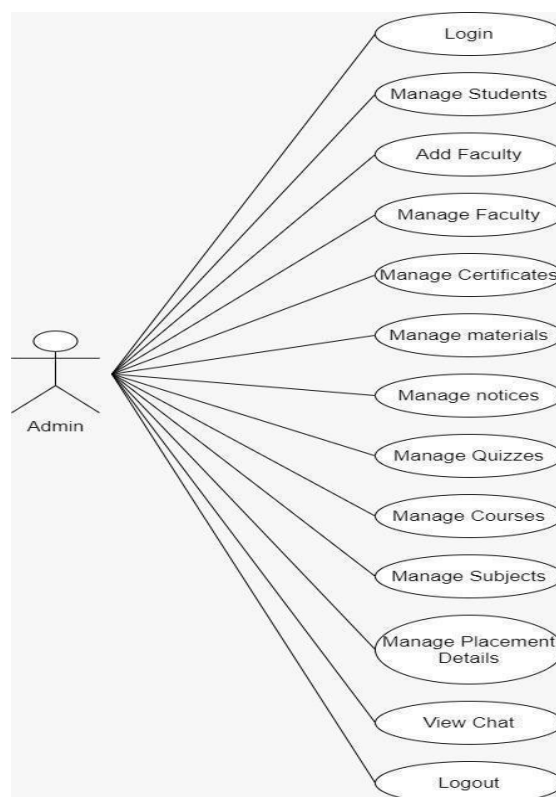

Fig.4: Use case Diagram for Admin

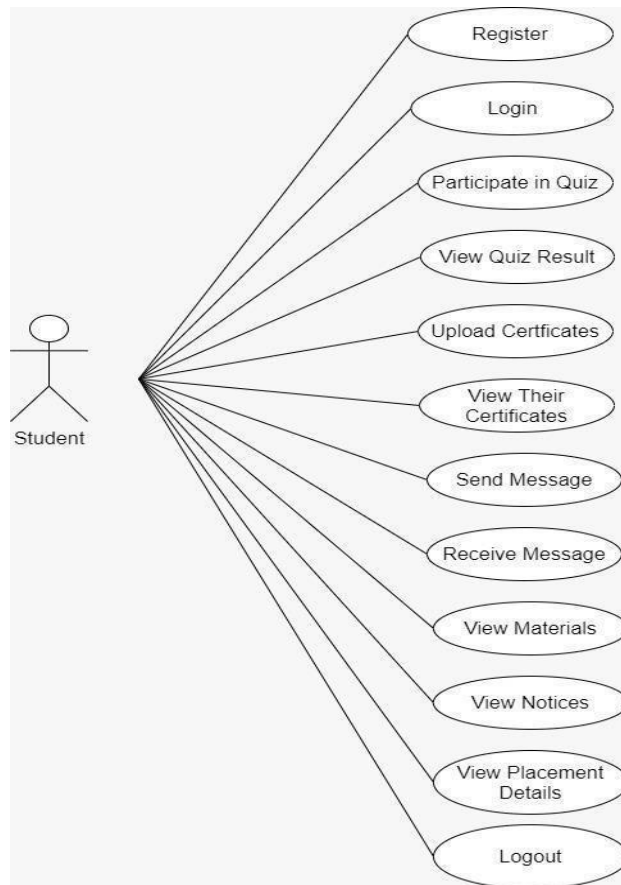

Fig.5: Use case Diagram for Student

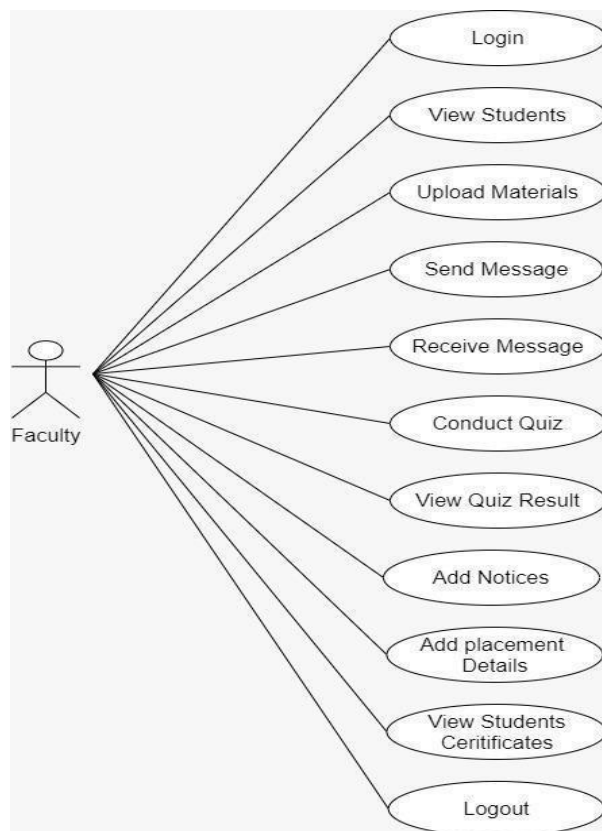

Fig.6: Use case Diagram for Faculty

## 5.4 Entity-Relationship Diagram:

An entity-relationship (ER) diagram is a specialized graphic that illustrates the relationships between entities in a database. ER diagrams often use symbols to represent three different types of information. Boxes are commonly used to represent entities. Diamonds are normally used to represent relationships and ovals are used to represent attributes.

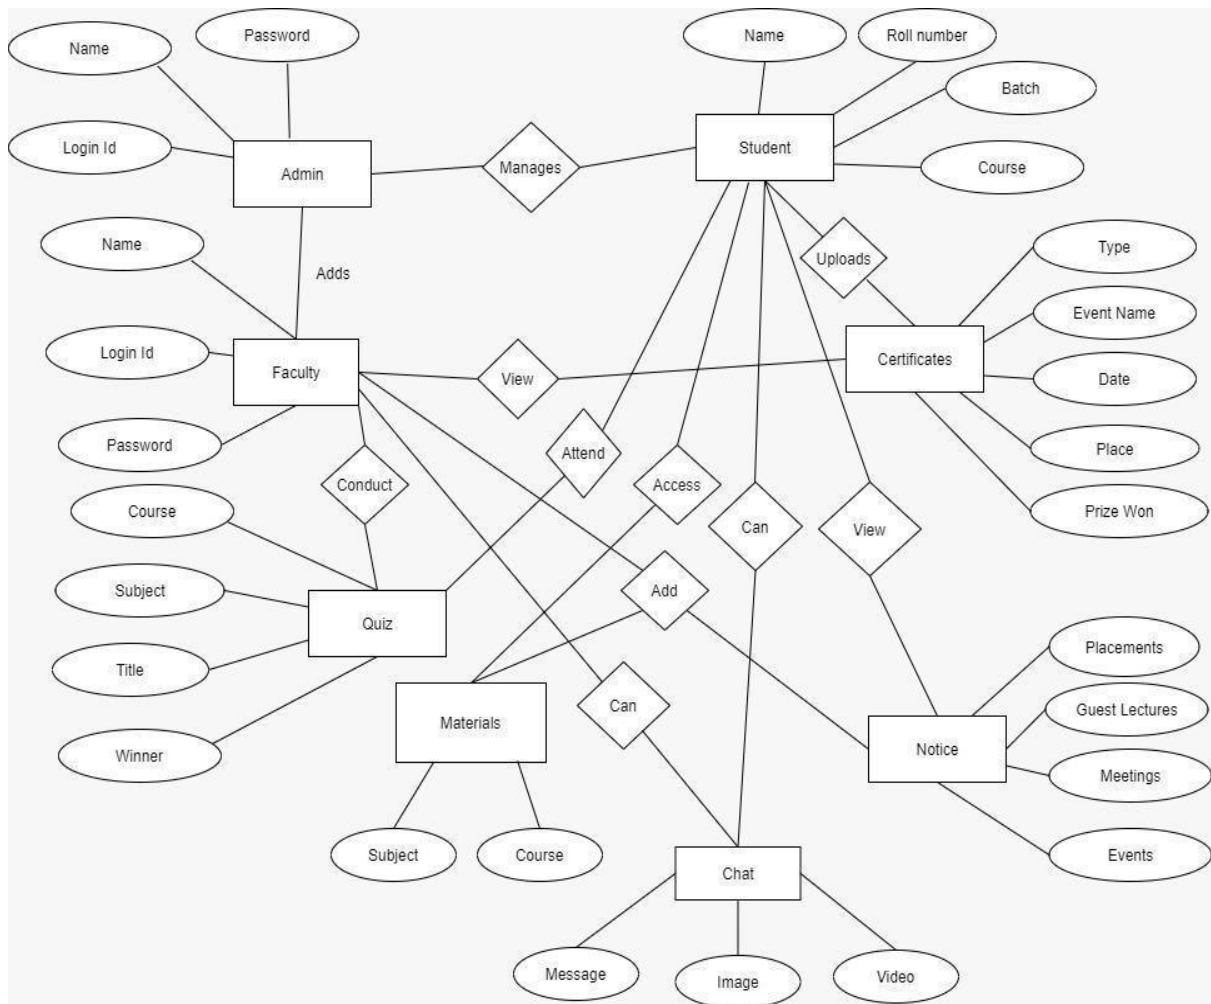

Fig.7: ER Diagram

## **6. Detailed Design**

### **6.1 Introduction**

The purpose of preparing this document is to explain complete design details of our project StellarStudent.

This detailed design report will mainly contain the general definition and features of the project, design constraints, the overall system architecture and data architecture. Additionally, a brief explanation about our current progress and schedule of the project will be provided in related sections. Design of the system and subsystems/modules will be explained both verbally and visually by means of diagrams in order to help the programmer to understand all information stated in this document correctly and easily.

### **6.2 Structure of the software package:**

The Components are –

- Dashboard module is for administrator where admin can manage complete control of the website. Admin is the super user of the website.
- In the settings module the administrator can add or delete department details, course details, subject details, etc.
- The faculties can publish quiz questions, study materials, timetable, syllabus and result.
- The students can login to the website by entering login id and password.
- All the questions and answers record stores in the discussion panel. All students can view discussion panel records.
- In the study material module, the faculties can upload notes and documents by entering book details.
- The chat module allows users to chat with their friend circles.
- The faculty can create quiz and student can take up quiz. The quiz result and point system will display in the student account panel.

### **6.3 Modular Decomposition of Components:**

#### **6.3.1 Dashboard Component**

##### **Identification of Modules:**

The modules identified in this component are:

- Admin account
- Publish news
- Publish events
- Publish meeting schedule
- Add course records
- Add subject records
- Add certificate types

### Structure chart for Dashboard:

### 6.3.2 Faculty Component:

#### Identification of Modules:

The modules identified in this component are:

- Quiz materials
- Study materials
- Students record
- Faculty profile
- Certificates

### Structure chart for Faculty:

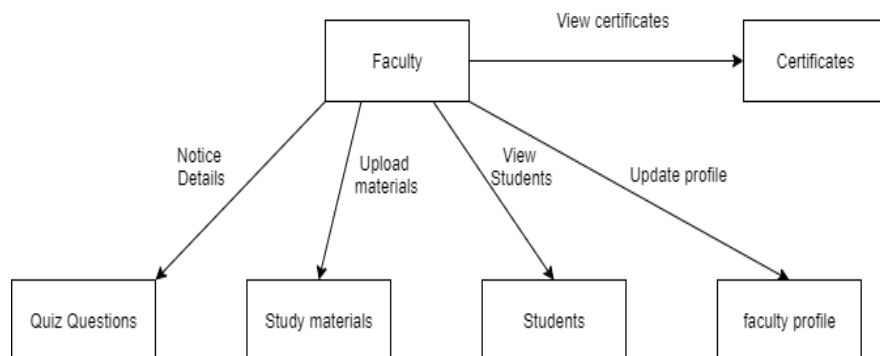

Fig.9: Faculty Structure

### 6.3.3 Discussion Component:

#### Identification of Modules:

The modules identified in this component are:

- Post discussion forum
- Discussion reply
- View discussion forum

### Structure chart for Discussion:

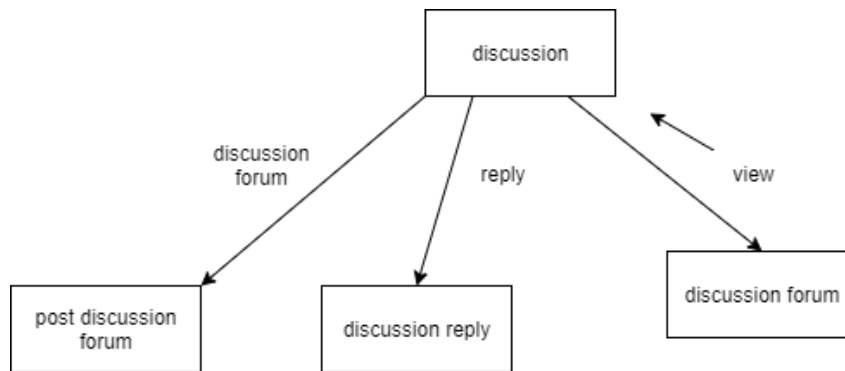

Fig.10: Discussion Structure

### 6.3.4 Quiz Component:

#### Identification of Modules:

The modules identified in this component are:

- Upload quiz question
- Attend quiz exam
- Quiz result

### Structure chart for Quiz:

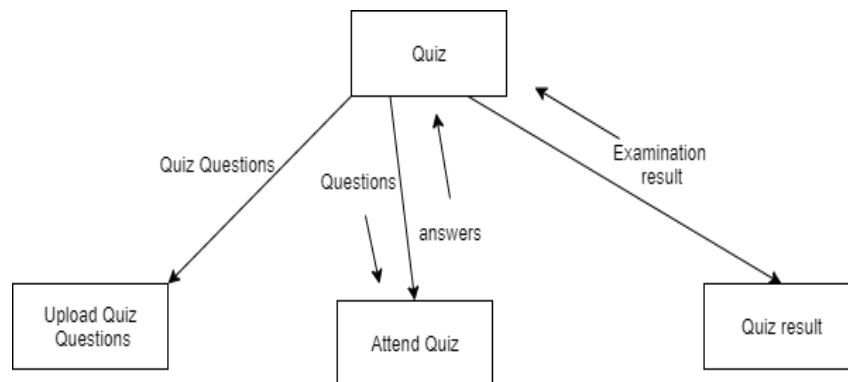

Fig.11: Quiz Structure

### 6.3.5 Study material Component:

#### Identification of Modules:

The modules identified in this component are:

- Upload notes
- View study materials

### Structure chart for Study material:

## 7.2 Testing:

### Introduction:

Testing is the major quality control measure used during software development. It is a basic function to detect errors in the software. During the requirement analysis and design the output of the document that is usually textual and non-executable after the coding phase the computer programs are available that can be executed for testing purpose. This implies that testing not only has to uncover errors introduced during the previous phase. The goal of testing is to uncover requirement, design, and coding errors in the program.

Testing determines whether the system appears to be working according to the specifications. It is the phase where we try to break the system and we test the system with real case scenarios at a point.

### Levels of Testing:

- **Unit Testing:**

The unit testing of the source code has to be done for every individual unit of module that was developing part of the system and some errors were found for every turn and rectified. This form of testing was used to check for the behavior signified the working of the system in different environment as an independent functional unit.

- **Integration Testing:**

From the individual parts to the cohesion of each part to make the system as a whole, there is need to test the working between the assembled modules of the system. The modules are integrated to make up the entire system. The testing process is concerned with finding errors that result from unanticipated interaction between the sub-system and system component. It is also concerned with validating the system meets its functional and non-functional requirement.

- **System Testing:**

The requirement specification document that is the entire system is to be tested to see whether it meets the requirement or not.

### Test Reports:

#### Test Unit: User Component

#### Adding User:

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If user type is not selected	usertype	Kindly select user type.	SUCCESSFUL
2.	If user name contains other than Character values	name	Name should contain only alphabets.	SUCCESSFUL

3.	If login id contains other than alphabets and digits	loginid	Only alphabets and numeric values are allowed.	SUCCESSFUL
4.	If password length is less than 8 characters	password	Password must contain at least 8 characters.	SUCCESSFUL
5.	If password and confirm password does not match.	password, confirmpassword	Password and Confirm password are not matching.	SUCCESSFUL
6.	If status is not selected	status	Kindly select your status.	SUCCESSFUL

#### User login:

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If login id contains other than alphabets and digits	loginid	Only alphabets and numeric values are allowed.	SUCCESSFUL
2.	If password contains less than 8 characters	password	Password must contain at least 8 characters..	SUCCESSFUL

#### Profile Update:

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If user name contains other than Character values.	name	Name should contain only alphabets.	SUCCESSFUL

#### Change user password:

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If the old password contains less than 8 characters	oldpassword	Password must contain at least 8 characters.	SUCCESSFUL

2.	If the new password	newpassword	Password must contain at least 8	SUCCESSFUL
	contains less than 8 characters		characters.	
3.	If the password and confirm password does not match	newpassword, confirmpassword	Password and Confirm password are not matching.	SUCCESSFUL

### Test Unit: Student Component

#### Student Registration

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If student name contains other than Character values	name	Name should contain only alphabets.	SUCCESSFUL
2.	If course is not selected	course	Kindly select your course.	SUCCESSFUL
3.	If roll number contains other than alphanumeric value	rollno	Only alpha numeric values allowed.	SUCCESSFUL
4.	If password contains less than 8 characters	password	Password must contain at least 8 characters.	SUCCESSFUL
5.	If password and confirm password does not match	password, confirmpassword	Password and Confirm password are not matching.	SUCCESSFUL
6.	If E-mail ID is invalid	emailid	Invalid E-mail ID.	SUCCESSFUL

#### Student Login:

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If the Registration Number and Password does not match.	rollno, password	Invalid Roll Number and password	SUCCESSFUL

2.	If roll number contains other than digits and alphabets	rollno	Only alphanumeric values allowed.	SUCCESSFUL
3.	If password contains less than 8 characters	password	Password must contain at least 8 characters..	SUCCESSFUL

#### Student Profile Update:

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If student name contains other than Character values	name	Name should contain only alphabets.	SUCCESSFUL
2.	If E-mail ID is invalid	emailid	Invalid E-mail ID.	SUCCESSFUL

#### Student Change Password:

Test ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If the old password contains less than 8 characters	oldpassword	Password must contain at least 8 characters.	SUCCESSFUL
2.	If the new password contains less than 8 characters	newpassword	Password must contain at least 8 characters.	SUCCESSFUL
3.	If the password and confirm password does not match	newpassword, confirmpassword	Password and Confirm password are not matching.	SUCCESSFUL

#### Student Forgot Password:

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If the Registration Number and email ID does not match.	rollno, emailid	Invalid login credentials entered.	SUCCESSFUL
2.	If roll number contains other than Alphanumeric value	rollno	Only alphanumeric values allowed.	SUCCESSFUL

3.	If the E-mail ID is invalid.	emailid	Enter the valid email id.	SUCCESSFUL
----	------------------------------	---------	---------------------------	------------

**Test Unit: Notice component:**

**Add Notice:**

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If notice type is not selected	noticetype	Kindly select Notice type.	SUCCESSFUL
2.	If title is not entered	title	Title cannot be empty.	SUCCESSFUL
3.	If description is not entered	description	Kindly add description.	SUCCESSFUL

**Test Unit: Wallpost component:**

**Chat:**

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If message is not entered	text	Message cannot be empty.	SUCCESSFUL
2.	If image is not chosen	image	Kindly post image.	SUCCESSFUL
3.	If video is not chosen	video	Kindly post video.	SUCCESSFUL

**Test Unit: Course component:**

**Add Course:**

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If course is not added	coursetitle	Kindly add Course.	SUCCESSFUL

**Test Unit: Subject component: Add Subject:**

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If course is not selected.	coursetitle	Kindly select Course.	SUCCESSFUL
2.	If subject is not added.	subject	Kindly add Subject.	SUCCESSFUL

**Test Unit: Discussion component:**

**Add Discussion:**

Test ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If subject is not selected	subject	Select the subject.	SUCCESSFUL
2.	If title is not entered	Title	Title must be entered	SUCCESSFUL
3.	If description is not entered	description	Description should not be empty.	SUCCESSFUL

**Test Unit: Discussion Reply component:**

**Give Reply:**

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If the title and uploads are empty.	title, uploads	Reply cannot be empty.	SUCCESSFUL

**Test Unit: Study Material component:**

**Add Material:**

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If course is not selected.	Course title	Kindly select Course.	SUCCESSFUL

3.	If subject is not selected.	subject	Kindly select Subject.	SUCCESSFUL
4.	If title is not entered	title	Title should not be empty.	SUCCESSFUL
5.	If uploads are not added	uploads	Kindly include uploads.	SUCCESSFUL

### Test Unit: Quiz Component:

#### Add Quiz:

Test ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If course is not selected	course	Kindly select course.	SUCCESSFUL
3.	If subject is not selected	subject	Kindly select subject.	SUCCESSFUL
4.	If title is not entered	Title	Title must not be empty.	SUCCESSFUL

#### Add Questions:

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If quiz question is not added.	question	Kindly add quiz question.	SUCCESSFUL
2.	If options are not added	option1, option2, option3, option4	Options cannot be empty.	SUCCESSFUL
3.	If correct answer is not selected	Correct answer	Kindly select the correct answer.	SUCCESSFUL

### Test Unit: Certificate Component:

#### Add Certificate:

Test Case ID.	Condition To be Tested	Test Data	Expected Output	Remarks
1.	If certificate is not selected	certificate	Kindly select certificate.	SUCCESSFUL

2.	If certificate date is not mentioned	semester	Kindly select certificate date.	SUCCESSFUL
3.	If event name is not entered	subject	Kindly select event name.	SUCCESSFUL
4.	If Organization name is not entered	Title	Organization name must not be empty.	SUCCESSFUL

## **8. Conclusion and Future Scope**

The project work titled “StellarStudent” has been designed using PHP – Hypertext Pre-Processor where in many user-friendly form controls have been added in order to make it a user interactive application. The system is developed in such a way that the user with common knowledge of computers can handle it easily. This website makes it easy for the BVRIT-H College to interact with their staffs and students in single platform.

It was a wonderful learning experience while working on this project. This project took us through the various phases of project development and gave us real insight into the world of software designing. The joy of working and the thrill involved while tackling the various problems and challenges gave us a feel of developer’s industry. It was due to the project we came to know how professional software’s are designed. The future enhancements to the system can be made as technology changes.

Future scope concerns incorporating facility for students to register for events mentioned from the website, feedback and testimonials given by alumni and providing a platform to stream the guest lectures that happened in the college.
